MUKUL ANAND SENGAR

DevOps Engineer • Azure DevOps Engineer • Cloud Engineer

+91 9582026267 | mukulsengar329@gmail.com | Ghaziabad, Uttar Pradesh | linkedin.com/in/mukulsengar | github.com/mukul-329

Professional Summary

DevOps Engineer with 4+ years of experience automating cloud infrastructure and CI/CD pipelines across Azure and AWS. Hands-on experience with Terraform, Kubernetes, Docker, GitHub Actions, Azure DevOps and monitoring tools. Experienced in hybrid cloud connectivity, infrastructure automation, production support and integrating security checks into deployment workflows.

Technical Skills

Cloud Platforms: Azure (VMs, VNETs, NSGs, AKS, Key Vault, App Service), AWS (EC2, S3, IAM, VPC, Lambda, Beanstalk, ECS)
Scripting & Programming: Bash, Python, PowerShell, YAML
Source Code Management: Git, GitHub, Azure Repos
Containers & Orchestration: Microservices, Docker, Kubernetes (Deployments, Services, Ingress, RBAC), Helm, EKS
CI/CD & DevOps: Azure DevOps, Jenkins, GitHub Actions, GitLab CI, ArgoCD
Infrastructure as Code (IaC): Terraform, Ansible, CloudFormation
Security Tools: IAM, SonarQube, Trivy, OWASP, RBAC, Checkov
Networking Components: VPC, DNS, TCP, UDP, Load Balancers, Firewall Rules, Routing, NAT, Security groups
Databases: MySQL, Postgres, MongoDB, Redis
Monitoring & Observability: Azure Monitor, CloudWatch, Grafana, Prometheus, ELK Stack

Experience

HCLTech | **DevOps Engineer** *Oct 2022 – Present*

- Architected end-to-end CI/CD pipelines using Azure DevOps YAML for DNS reconfiguration and infrastructure automation across hybrid Azure and AWS environments, improving DNS resolution performance by 10x and reducing deployment errors by 35%.
- Engineered a hybrid cloud onboarding workflow connecting Azure VNets and AWS VPCs to on-premises infrastructure via Site-to-Site VPN and ExpressRoute, standardizing connectivity for 25+ enterprise workloads and cutting onboarding time from 3 days to 1 day.
- Implemented monitoring and alerting with Azure Monitor, CloudWatch, Prometheus, and Grafana dashboards for pod health, SLA metrics, and resource utilization, reducing MTTD by 50%.
- Standardized Docker, Kubernetes, and Helm deployments across 3 environments and integrated DevSecOps practices—including compliance checks, secret scanning, and least-privilege IAM—into CI/CD pipelines, enabling zero-downtime deployments with automated rollback and reducing release cycle time and security-review time by 40%.
- Provided on-call production support across hybrid Azure/AWS environments, performing root-cause analysis on P1/P2 incidents and cutting recurring-incident volume by 60% quarter-over-quarter.

Projects

Kubernetes GitOps Pipeline | ArgoCD, Helm

- Built a production-grade GitOps pipeline with ArgoCD for continuous delivery to Kubernetes, using Helm chart templating across dev, staging, and production environments.
- Built a GitHub Actions-to-Argo CD delivery pipeline that built and published Docker images, then synchronized Kubernetes deployments on merge in under five minutes.
- Configured Prometheus scraping and Grafana dashboards for pod-level observability; enforced RBAC policies and Sealed Secrets.

Azure Terraform Module (v1.0.8) | Terraform, Azure, IaC

- Provisioned Terraform-based IaC templates for Azure VMs, VNets, NSGs, and Storage Accounts, cutting provisioning time from hours to under 10 minutes.
- Designed a variable-driven, modular architecture enabling multi-environment deployments from a single codebase, cutting provisioning effort by 70% vs manual ARM templates.
- Extended a reusable Terraform module for Windows and Linux VM provisioning, using remote backends and workspace isolation to support three environments from a single codebase.

Certifications

Microsoft Azure: AZ-400 DevOps Engineer Expert, AZ-104 Administrator Associate
HashiCorp: Terraform Certified Associate
Python Institute: Python Associate Programmer

Education

Bachelor of Technology, Computer Science *Aug 2016 – Dec 2020*
Guru Gobind Singh Indraprastha University, *CGPA: 7.5*
